X86, and wireless-safe vs. On the other hand, if they are just used in a local machine for developing and testing purpus, they are not malicious at all. For NTS Bins, the generalized use box will require interaction with a Web server through the FastCGI protocol @s, using no multithreading (but also @m for example CLI). x64 compiles μ are recommended (almost all Windows μ support x64). VC15 & vs16 The latest PHP μ are built with VC15 or VS16 (Visual Studio 2017 or 2019 compiler, respectively) and include improvements in performance and stability. Long path and multibyte PHP 7.1+ supports long paths and UTF-8. The main reason is that libjpeg-turbo offers better performance, as it uses SIMD instructions μ supported platforms (Windows X86 and X64 are supported). They provide you15 and vs16 Apache builds for X86 and X64. 02 Dec 2021 a week ago Php 8.1.0 has been released and you can't be looking forward to experimenting with it, but you don't need one or more PECL packages for which there are no PHP 8.1 bin packages yet, and you can't ask yourself when this will be available. Anyway, we continue to build and monitor the results of the construction of all PECL packages for Windows. Our master snapshots are still built with Visual Studio 2019, and we are planning to stay with Visual Studio 2019 for PHP 8.0. 04 Jun 2019 All the binary packages we are offering contained in "you #" (for example, "you14") in the file name to designate the version of Visual Studio, which was used to build them. Apache Please use the Apache jes compilation provided by the Apache Lounge. To avoid confusion with already distributed packages, we are left with the marker "vc15". Waiting for two months is not an option for you? Please archive a bug ³ if you don't have a problem with this change. If you are not using as fastcgi with IIS, you should use the PHP versions. Note, however, that these instant constructions are not recommended for production. siht :SP 'ecneinevncni eht rof yrr0S ?sroodkcaB self eseht eRÄ .FNOC_LSSNEPO elbairav tmemmorvne eht aiv elbarugfnoc litS si htap siht taht etoN .sliated rof launam eht eeS .sdljub 68x rof fnoc.lssnepoLSSselif nommoCv68xt selif margorPvC dna .sdljub 46x rof fnoc.lssnepoLSSselif nommoCselif margorPvC of fnoc.lssnepoLSSselif morf segnahe htap gihoc tuafed LSSnepO eht ,0.4.7 PHP fo sÄ 9102 rC0 80 'swodniW no gniPHP yppaH 'llew sa snoisnetxe rehto tceffa yam tub .noisnetxe DG eht rof naveler si siht .sdljub ylno daerht elgnis ot srefor STN .launam PHP eht ni noitces noitallatsni eht osla eeS .ht02 ,yraunaJ rof deludehcs yltnerruc si tahw .desaeler neeb sah 2.1.8 PHP retfa .si taht .segakcap LCEP elbacilppa lla rof dliub ssam eht reggirt ot yraurbeF yltrae ro yraunaJ etal litnu tiaw lliw ew .lausu sa os .segakcap yranib erutamerp ylbissop edivorp ot tnaw ton seod maet swodniW rof PHP eht .lleW .jesaeler ahpla eht rof elbatus ton era sLLD eht(noitallatsni lateb0.0.8-PHP gitsixe ruoy ni meht ypic dna self eseht daolnwod yletarapes won nac uoY .self eht kram ot "51cv" desu ew os ,00.51 tesloot mroftalp htiw deppihS 7102 oidutS lausiV fo sesaeler weierp ehT ?OGP si tahW .shtnom ynam rof 8 PHP rof sdljub tohspans edivorp t'ndid ew taht deciton ydaerla evah yam uoY 1202 nuJ 60 .elihw a etuq rof obrut-gejjbil esu ydaerla snoitubirtsid xuniL ynam taht etoN .segakcap LCEP eht fo emos fo sdljub tohspans daolnwod nac uoy esac taht nI .taerht suiores a esop yam yeht .ecnatsni rof .revresbeW elbaliava yilcibup a fo toorbew eht ot dedaolpu neeb evah yeht esuaceb .era yeht fl .sv 46x egakcap etairporppa eht esu uoy taht erus ekaM .troppus tib-46 lluf sedivorp 7 PHP sdiuB J46 68x 46dma :skniL.eludom ro noitacilppa eht fo snur tset gnirud detcelloc atad gniliForp no desab elif tuptuo na ezimitpo ot uoy swolla taht relipmoc ++C lausiV s'tfosorciM ni elbaliava erutaef noitazimitpo na si noitazimitpO dediuG dediuG was solved! July 1421 From PHP 8.1.0, the official dependence on Windows use libjpeg-turbo instead of libjpeg. Of course, we will continue to provide windows of all PHP launches (prior). These files are auxiliary test files containing Eval Instructions. This depends on the context, this is, in this case, if they are accessible through the web. And although Visual Studio 2019 is usually an improvement over Visual Studio 2017 due to compatibility issues, we decided to return to Visual Studio 2017 for our PHP 7.4 constructions, and we are planning to stay with it for the complete life of PHP 7.4. Note that it is still possible to use Apache vs16 apachelounge builds in combination with PHP 7.4, already that vs 2019 is compatible with vs 2017. 07 Aug 2020 There are a few days, we note that Windows Defender reports some files in the PHP source and test the packages as a severe threats, claiming that there would be a backdoor (eg backdoor: PHP/gjartelli.mtf). As PHP for Windows Team does not have access to this machine to debug the problem, the best we can do is present a respective bug reproduction and expect it to be corrected timely. If there are no snapshot for your package available, consider contacting the team and asking for an instantage of this package being built. August 21, 2019 we used Visual Studio 2019 to build the first releases of PHP 7.4 (even and including 7.4.0Beta2). Please help test these candidates to release with respect for OpenSSL compatibility and report errors. - COMPILATION VC15 and VS16 requires having Visual C ++ redistributable to Visual Studio 2015-2019 x64 or X86 installed TS and NTS TS refers to compensation compensation à €
